

# Functional Assessment & Treatment of COPD Patients: A Primer for Home Care Field Staff

Webinar & Audio Recording—Tuesday, February 12, 2019 • 12:00—1:30 pm CST

Recording available through April 30, 2019

Home care has seen a dramatic increase of patients with COPD, resulting in greater focus on the therapy needs of these individuals. These numbers are likely to increase. According to the National Heart, Lung and Blood Institute, an estimated 12 million adults have been diagnosed with Chronic Obstructive Pulmonary Disease (COPD), and many more may be living with the disease without knowing it. While there is no cure for COPD, there are treatments that can effectively ease symptoms, cut the risk of complications, and improve a patient's quality of life.

This webinar will cover prevalence of the condition, including risk factors, as well as the impact of COPD on skeletal muscle function, specifically lower extremity function. This evidence-based educational program will provide insight and relevant information on assessment & treatment strategies for home care patients suffering from the effects of COPD.

### About the Speaker:

**Ernest Roy, PT, DPT** is the Home Care Therapy Team Leader for Pemi-Baker Community Health, in Plymouth, NH. He is a certified Chronic Care Management Trainer and has been certified as a Strength & Conditioning Specialist from the National Strength and Conditioning Association. Ernie has extensive experience in a variety of roles, including Acute Care, Outpatient, Home Health and Industrial Rehabilitation. He has been in practice as a Physical Therapist for 30 years.
